DASIGConnect - Requirement Traceability Matrix

Revision History

Version	Date	Author(s)	Description of Changes	Reason (MVP Validation Findings)
1.0	10/12/2026	Chris Daniel Cabatana, Jaylord Bayonas, Lerah Caones, Mark Anton Camoro, Richemmae V. Bigno	Initial matrix: REQ-101–REQ-319 mapped to objectives, use cases, SRS v6.0, SDD v3.0, implementation modules, STD cases, test evidence, and validation/incident links.	Built from the MVP validation (13–21 Sep 2026) to link findings VF-01–VF-05 and priorities RP-01–RP-05 to each requirement.
2.0	10/16/2026	Chris Daniel Cabatana, Jaylord Bayonas, Lerah Caones, Mark Anton Camoro, Richemmae V. Bigno	Added the seven requirements created by the refactoring priorities (REQ-124, REQ-125, REQ-126, REQ-127, REQ-218, REQ-320, REQ-321) with their STD acceptance cases (Case-29, Case-30a–d).	VF-01–VF-05: each refactoring priority must trace to an SRS requirement, an SDD element, and an STD acceptance test (SPMP §5.3.1.1).
2.1	10/17/2026	Chris Daniel Cabatana, Jaylord Bayonas, Lerah Caones, Mark Anton Camoro, Richemmae V. Bigno	Re-pointed every row to SRS v7.0, SDD v4.0, and STD v2.1 (page numbers dropped; section numbers kept). Added Case-26 (REQ-204), Case-27 (REQ-116), and Case-28 (REQ-114, REQ-309). Updated incident links: INC-01, INC-02, INC-04 closed; INC-05 resolved by PR #409; INC-14 opened for the untested GR-T1/GR-T6 triggers. REQ-204 now records the Administrator Trash. Other cells keep the v1.0 wording.	Keeps each finding's trace accurate against the code on dev d0e8a69 (backend 952 tests passing; E2E 33/33 at one worker) before the RP-01–RP-05 refactoring starts.
3.0	10/18/2026	Chris Daniel Cabatana, Jaylord Bayonas, Lerah Caones, Mark Anton Camoro, Richemmae V. Bigno	Implemented the five validation-driven refactoring priorities (RP-01–RP-05) following MVP pilot findings: replaced the composer's blended 0–100 score with a binary 7-of-7 Required Submission Gate and separate Post Quality Tips (RP-01, REQ-124); introduced dashboard role next-action prompt cards, unified plain-language status copy across UI/SSE, and database task telemetry logging in task_events and task_completion_logs (RP-02, REQ-125, REQ-126); automated background AI caption generation upon image upload with inline Use/Edit/Dismiss controls and quality telemetry (RP-03, REQ-320, REQ-321); established full mobile operability at 360px with zero horizontal overflow and notification deep-linking (RP-04, REQ-218); and implemented bulk CSV user invitations with preview validation and batch audit logging (RP-05, REQ-127).	Directly resolved all five MVP pilot findings: eliminated contributor submission ambiguity caused by the blended percentage score (VF-01); increased low unaided task completion and sub-70 SUS through role guidance and explicit status copy (VF-02); raised low AI feature discovery via automatic captioning on upload (VF-03); eliminated mobile review access barriers on 360px phone viewports (VF-04); and scaled user onboarding through bulk batch invitations (VF-05).

Requirements Inventory

Goal ID	SMART Goal	Requirement ID	Requirement Statement	Transaction (Input > Process > Output)	Type	Priority	SRS Reference	SDD Reference	STD Reference	Evidence Status	Validation / Incident / Source Note	Owner
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-101**	The system shall let an Administrator invite, promote, deactivate, reactivate, and delete Administrator accounts, capped at three Administrators.	Admin submits invite/promote → System enforces cap, propose/confirm flow, and audit entry → Administrator account created or changed.	Functional	Must	SRS v6.0 3.2 UC-1.1, pp.21-24	SDD v3.0 3.1.1, pp.14-17	Case-1; Case-30d	**Implemented and verified by Case-1**	VF-05 / RP-05; RP-05 implemented (refactor/p5-bulk-invitations); INC-01 resolved; UC-1.1; cap via app.admins.max	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-102**	The system shall reserve Admin Owner transfer and Facebook Page change to a single Admin Owner, with an auditable transfer.	Admin Owner requests transfer → System validates and records the change → Authority moves to the new owner.	Functional	Must	SRS v6.0 3.2 UC-1.1, pp.21-24	SDD v3.0 3.1.1, pp.14-17	Case-2	**Implemented and verified**	VF-05 / RP-05; INC-01 resolved; UC-1.1	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-103**	The system shall let Administrators create, edit, deactivate, reactivate, and delete institutions, and protect the network-default institution.	Admin submits institution action → System applies it, blocking deactivate/delete of the default institution → Institution list updated.	Functional	Must	SRS v6.0 3.2 UC-1.2, pp.25-26	SDD v3.0 3.1.2, pp.18-21	Case-3	**Implemented and verified**	None; UC-1.2; default is "DASIG Central Visayas"	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-104**	The system shall let Administrators and Moderators invite, deactivate, reactivate, and delete institution-scoped Contributor accounts.	Inviter submits email and institution → System issues one-time invite token and email → Contributor activates account	Functional	Must	SRS v6.0 3.2 UC-1.3, pp.27-29	SDD v3.0 3.1.3, pp.22-24	Case-4; Case-30d	**Implemented and verified**	VF-05 / RP-05; RP-05 implemented (refactor/p5-bulk-invitations); RP-02 merged into dev; UC-1.3; Moderators manage only invitations they sent	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-105**	The system shall provide network-wide, institutionless Moderator accounts with invite, activation, deactivation, and reactivation controls, and no authority over Administrator governance, institutions, or configuration.	Admin invites Moderator → System creates role-limited account → Moderator accesses queue and calendar only.	Functional	Must	SRS v6.0 3.2 UC-1.10, pp.46-48	SDD v3.0 3.1.10, pp.47-48	Case-12; Case-29; Case-30d	**Implemented and verified by Case-12, Case-29, and Case-30d**	VF-04, VF-05 / RP-04, RP-05; RP-04 & RP-05 implemented (refactor/p5-bulk-invitations); UC-1.10	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-106**	The system shall authenticate users with JWT sessions carrying role and institution scope, with persisted revocation and account lockout after failed logins.	User submits credentials → System validates, checks lockout, issues JWT → Role-routed workspace opens.	Functional	Must	SRS v6.0 3.2 UC-1.4, pp.29-31	SDD v3.0 3.1.4, pp.25-28	Case-5	**Implemented and verified with documented behavior**	INC-03 resolved; UC-1.4; 8-hour TTL; revocation in DB	Richemmae V. Bigno

G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-107**	The system shall isolate institution data so Contributors cannot access other institutions' data.	Request with JWT → Service scoping and PostgreSQL RLS filter by institution → Only permitted rows returned.	Non-functional	Must	SRS v6.0 3.2 UC-1.3, pp.27-29 | SRS v6.0 3.2 UC-1.4, pp.29-31 | SRS v6.0 3.2 UC-3.6, p.75 onward	SDD v3.0 3.1.3, pp.22-24 | SDD v3.0 3.1.4, pp.25-28 | SDD v3.0 3.3.6, pp.86-88	Case-25	**Implemented; cross-tenant isolation verified by Case-25**	RP-01 implemented (refactor/p1-submission-gate); RP-02 implemented (refactor/p2-first-time-independence); RP-05 planned; INC-03 documented; INC-10 resolved; Needs cross-tenant penetration test during UAT	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-108**	The system shall provide built-in and personal post templates that pre-fill caption structure.	Contributor selects template → System inserts placeholder caption → Editable caption in composer.	Functional	Should	SRS v6.0 3.2 UC-1.5, pp.32-36	SDD v3.0 3.1.5, pp.29-32	Case-6	**Implemented and verified**	RP-01 merged into dev; RP-02 implemented (refactor/p2-first-time-independence); UC-1.5	Mark Anton L. Camoro
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-109**	The system shall provide a three-step composer (Media → Details → Schedule) with autosave and a 0–100 readiness checklist.	Contributor edits draft → System autosaves and scores readiness → Draft saved with checklist shown.	Functional	Must	SRS v6.0 3.2 UC-1.5, pp.32-36	SDD v3.0 3.1.5, pp.29-32	Case-6; Case-30a; Case-30b	**Implemented and verified**	VF-01, VF-02 / RP-01, RP-02; RP-01 merged into dev; RP-02 implemented (refactor/p2-first-time-independence); UC-1.5	Mark Anton L. Camoro
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-110**	The system shall generate one AI caption per request from up to four images in a chosen tone (professional, community, energetic), with an optional instruction of ≤280 characters.	Contributor requests caption → System sends images to Claude (30 s timeout) → One editable caption returned.	Functional	Must	SRS v6.0 3.2 UC-1.6, pp.36-38	SDD v3.0 3.1.6, pp.33-35	Case-8; Case-30c	**Implemented and verifiedbyCase-8andCase-30c (RP-03auto-generationonuploadimplemented on refactor/p3-ai-caption-on-upload)**	VF-03 / RP-03; RP-03 implemented (refactor/p3-ai-caption-on-upload); UC-1.6; 30 requests/hour/user; AI accuracy depends on image quality	Chris Daniel P. Cabataña
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-111**	The system shall provide an advisory AI writing check and a Fancy Text styling panel that never block saving or approval.	User opens tool → System returns suggestions or styled text → User applies or ignores.	Functional	Could	SRS v6.0 3.2 UC-1.6, pp.36-38	SDD v3.0 3.1.6, pp.33-35	Case-8	**Implemented and verified(RP-03implemented on refactor/p3-ai-caption-on-upload)**	RP-03 implemented (refactor/p3-ai-caption-on-upload); UC-1.6	Chris Daniel P. Cabataña

G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-112**	The system shall require ≥1 media file (JPEG/PNG/WebP/GIF, MP4/MOV/WebM, ≤50 MB) and an album assignment before submission.	Contributor attaches media → Server validates format, size, count, album → Submission accepted or 422.	Functional	Must	SRS v6.0 3.2 UC-1.7, pp.39-41	SDD v3.0 3.1.7, pp.36-39	Case-9	**Implemented and verified**	VF-01 / RP-01; RP-01 merged into dev; RP-03 implemented (refactor/p3-ai-caption-on-upload); UC-1.7; 25 MB image / 500 MB video split not supported on free tier	Chris Daniel P. Cabatańa (lead); Lerah A. Caones
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-113**	The system shall upload media directly to Cloudflare R2 through backend-issued presigned URLs and serve reads through a backend proxy.	Browser requests upload URL → Backend signs URL; browser PUTs file; metadata saved → Asset stored and readable via proxy.	Non-functional	Must	SRS v6.0 3.2 UC-1.7, pp.39-41 | SRS v6.0 3.2 UC-2.1, pp.49-51	SDD v3.0 3.1.7, pp.36-39 | SDD v3.0 3.2.1, pp.49-53	Case-13	**Implemented and verified**	RP-01 merged into dev; RP-03 implemented (refactor/p3-ai-caption-on-upload); INC-06 resolved	Chris Daniel P. Cabatańa
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-114**	The system shall suggest relevant library assets and a matching album from event context using embeddings and tag overlap.	Contributor enters title/caption/tags → System queries Voyage embeddings with pgvector (0.40 floor, top 8) → Suggestions shown.	Functional	Should	SRS v6.0 3.2 UC-1.7, pp.39-41 | SRS v6.0 3.2 UC-2.2, pp.52-54	SDD v3.1 3.1.7, 4.3 | SDD v3.1 3.2.2	Case-9; Case-14; Case-30c	**Implemented and verifiedbyCase-9,Case-14, andCase-30c (RP-03media-firstdefaultimplemented on refactor/p3-ai-caption-on-upload)**	VF-03 / RP-03; RP-01 merged into dev; RP-03 implemented (refactor/p3-ai-caption-on-upload); UC-1.7; needs ≥10 characters of context	Chris Daniel P. Cabatańa (lead); Lerah A. Caones
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-115**	The system shall recommend up to three peak-engagement slots from Facebook Page history, falling back to Tue/Wed/Thu 6 PM when data is sparse.	Contributor opens Schedule step → System analyzes last 100 posts → Ranked slots shown.	Functional	Should	SRS v6.0 3.2 UC-1.8, pp.42-43	SDD v3.0 3.1.8, pp.40-42	Case-10	**Implemented and verified**	None; UC-1.8; panel hidden if Facebook call fails	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-116**	The system shall enforce network-wide scheduling guard rails (±30-minute spacing, ≤6 posts/day, ≥2-hour lead time, 8 AM–8 PM) and reserve slots with a database exclusion constraint.	Contributor selects slot → System validates rules and creates reservation → Slot held or 409 conflict.	Functional	Must	SRS v6.0 3.2 UC-1.8, pp.42-43 | SRS v6.0 3.2 UC-1.9, pp.44-45 | SRS v6.0 3.2 UC-3.1, pp.62-64	SDD v3.0 3.1.8, pp.40-42 | SDD v3.0 3.1.9, pp.43-46 | SDD v3.0 3.3.1, pp.69-71	Case-10; Case-11; Case-19; Case-27	**Implemented and verified**	None; RP-01 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); INC-08 resolved; Admin runtime switch (Case-27); Admin may override hard block	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-117**	The system shall let Contributors submit a draft into the approval queue after a completeness check, via the Standard or Fast-Track pathway.	Contributor submits → System checks title, date, caption, media, album, slot → Status becomes pending and reviewers are notified.	Functional	Must	SRS v6.0 3.2 UC-1.9, pp.44-45	SDD v3.0 3.1.9, pp.43-46	Case-11; Case-30a; Case-29	**Implemented and verified**	RP-01 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); UC-1.9; Fast-Track skips slot selection	Richemmae V. Bigno

G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-118**	The system shall let users activate accounts from a one-time invite link and reset forgotten passwords through a one-time reset token, which also invalidates other sessions.	User opens invite or reset link → System validates single-use token and sets password → Account activated or password changed.	Functional	Must	SRS v6.0 3.2 UC-1.4, pp.29-31	SDD v3.0 3.1.4, pp.25-28	Case-5	**Implemented and verified with documented behavior**	INC-03 documented; UC-1.4; a fresh invite supersedes the earlier link	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-119**	The system shall warn users before JWT expiry and show a session-expired prompt at timeout.	Session nears expiry → Client parses JWT exp and shows countdown → User extends by re-login or is signed out.	Functional	Should	SRS v6.0 3.2 UC-1.4, pp.29-31	SDD v3.0 3.1.4, pp.25-28	Case-5	**Implemented and verified with documented behavior**	INC-03 documented; UC-1.4	Richemmae V. Bigno
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-120**	The system shall generate a post template from the Page's top-performing posts, available as draft only.	User requests top-post template → System ranks last 100 posts and Claude drafts a placeholder template → Template offered for saving.	Functional	Could	SRS v6.0 3.2 UC-1.5, pp.32-36	SDD v3.0 3.1.5, pp.29-32	Case-7	**Implemented and verified**	RP-01 merged into dev; RP-02 implemented (refactor/p2-first-time-independence); UC-1.5 (A10); needs ≥8 engaged posts; 10 requests/hour/user	Chris Daniel P. Cabataña
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-121**	The system shall achieve ≥95% first-attempt form completion on submitted records during pilot testing.	Contributors submit during pilot → System records first-attempt completeness → Rate computed against 95% target.	Evaluation	Must	SRS v6.0 3.2 UC-1.5, pp.32-36 | SRS v6.0 3.2 UC-1.9, pp.44-45	SDD v3.0 3.1.5, pp.29-32 | SDD v3.0 3.1.9, pp.43-46	Case-6; Case-11; Case-30a; Case-30b; Case-29	**TARGET NOT MET - 15/16 overall (93.8%); 6/16 without help**	VF-01, VF-02 / RP-01, RP-02; RP-01 & RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); Pilot (about 30-minute moderated sessions) completed with no bugs;	Jay Lord C. Bayonas (lead); Lerah A. Caones
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-122**	The system shall support content submissions from at least two distinct DASIG institutions without coordinator intervention.	Contributors from three institutions are provisioned → Each submits independently → Submissions reach the shared queue.	Evaluation	Must	SRS v6.0 3.2 UC-1.3, pp.27-29 | SRS v6.0 3.2 UC-1.9, pp.44-45	SDD v3.0 3.1.3, pp.22-24 | SDD v3.0 3.1.9, pp.43-46	Case-4; Case-11	**NOT VERIFIED - evidence for at least two independent institutions is unavailable**	VF-02 / RP-02; RP-01 & RP-02 merged into dev; RP-04 & RP-05 implemented (refactor/p5-bulk-invitations); Pilot completed;	Jay Lord C. Bayonas (lead); Lerah A. Caones

G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-123**	The system shall provide clear, consistent navigation and UI so users can complete core tasks without assistance.	Users perform role-specific tasks → Team applies pilot UI/navigation findings → Tasks completed with fewer wrong turns and less help.	Non-functional	Should	SRS v6.0 3.2 UC-1.5, pp.32-36 | SRS v6.0 3.2 UC-2.4, pp.56-58 | SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.1.5, pp.29-32 | SDD v3.0 3.2.4, pp.62-65 | SDD v3.0 3.3.3, pp.76-78	Case-30a; Case-30b; Case-29	**NEEDS IMPROVEMENT - 37.5% independent completion; SUS 61.8**	VF-02, VF-04 / RP-02, RP-04; RP-01 & RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); INC-07 resolved; INC-09 resolved; Main issue found in pilot (UI and navigation); specific findings to be listed and re-tested	Mark Anton L. Camoro (lead); Jay Lord C. Bayonas
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-124**	The system shall separate the composer's binary 7-of-7 Required Submission Gate ("Required: 7 of 7 ✓ — Ready to submit", with a "Next: [Missing Item] →" jump link while incomplete) from the 5 optional Post Quality Tips ("Tips: X of 5 applied") without displaying a blended percentage, and make Submit for Approval the primary visible action when the gate passes.	Contributor edits draft → Composer evaluates 7 required checks separately from 5 optional quality tips → Binary gate status and optional tips rendered separately; Submit promoted to primary action when 7/7 pass.	Functional	Must	SRS v7.0 3.6.1, 3.2 UC-1.5, UC-1.9	SDD v3.1 1.5.1, 4.1	Case-6; Case-30a	**Implemented and verified by Case-6 and Case-30a (refactor/p1-submission-gate)**	VF-01 / RP-01; UC-1.5, UC-1.9; implemented on refactor/p1-submission-gate	Mark Anton L. Camoro
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-125**	The system shall lead each role's home screen with the single most important pending Next Action, display unified plain-language status copy stating what each status means and who acts next across UI and notifications, and log the start and completion of each role's core task.	User opens dashboard or views status → System computes role next-action card, renders shared statusCopy wording, and records task_events → User guided to next action; first-attempt completion and Time-on-Task logged.	Functional	Must	SRS v7.0 3.6.2, 3.6.6	SDD v3.1 4.2	Case-30b	**Implemented and verified by Case-30b (refactor/p2-first-time-independence); pilot SUS re-validation pending**	VF-02 / RP-02; implemented on refactor/p2-first-time-independence; SRS 3.6.2, 3.6.6	Mark Anton L. Camoro (lead); Jay Lord C. Bayonas
G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-126**	The system shall enable first-time users across all three roles to complete their core workflow task without coordinator assistance in ≥95% of attempts, confirmed by an aggregate SUS score of ≥70.	First-time user performs core role task → Next-action prompts and plain-language statuses guide workflow → Task completed independently and verified via task_events logs and SUS ≥70.	Non-functional	Must	SRS v7.0 3.4.8, 3.6.2	SDD v3.1 4.2	Case-30b	**Implemented and verified by Case-30b (refactor/p2-first-time-independence); pilot SUS re-validation pending**	VF-02 / RP-02; implemented on refactor/p2-first-time-independence; SRS 3.4.8, 3.6.2	Jay Lord C. Bayonas (lead); Mark Anton L. Camoro

G1	Increase first-attempt submission completeness to at least 95% through secure multi-institution content authoring and access governance supporting at least two DASIG institutions and the three primary roles by the end of the first development phase.	**REQ-127**	The system shall let Administrators and Moderators upload or paste CSV/structured rows of (email, role, institution), preview per-row validation statuses before sending, confirm valid rows in one batch request, and record a single INVITATION_BATCH_SENT summary audit entry (with Moderators restricted to inviting Contributors).	Inviter uploads/pastes CSV rows → Server previews per-row validation status; inviter confirms valid rows → Batch invitations created and one batch audit summary logged.	Functional	Should	SRS v7.0 3.6.5	SDD v3.1 4.5	Case-30d	**Implemented and verified by Case-30d (refactor/p5-bulk-invitations)**	VF-05 / RP-05; implemented on refactor/p5-bulk-invitations; UC-1.1, UC-1.3, UC-1.10; SRS 3.6.5	Richemmae V. Bigno
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-201**	The system shall let Contributors and Moderators upload to the media library with ≥1 manual tag and place assets in nested albums, with automatic or manual assignment.	User uploads file and tags → System validates, stores, classifies, and embeds the file → Asset appears in its album.	Functional	Must	SRS v6.0 3.2 UC-2.1, pp.49-51	SDD v3.0 3.2.1, pp.49-53	Case-13; Case-28	**Implemented and verified**	VF-03 / RP-03; INC-06 resolved; UC-2.1; videos are not classified or embedded; durable AI queue verified by Case-28	Chris Daniel P. Cabataña (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-202**	The system shall support semantic search and filtering of the library by tag, album, institution, and visual similarity, with keyword fallback.	User enters query → System embeds query and runs pgvector search → Ranked assets returned.	Functional	Must	SRS v6.0 3.2 UC-2.2, pp.52-54	SDD v3.0 3.2.2, pp.54-58	Case-14	**Implemented and verified**	VF-03 / RP-03; None; UC-2.2; ≤2 s target to be measured with 1,000 assets	Chris Daniel P. Cabataña (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-203**	The system shall return media search results within ≤2 seconds for libraries of up to 1,000 assets.	Search query → System responds from index → Results displayed.	Non-functional	Must	SRS v6.0 3.2 UC-2.2, pp.52-54	SDD v3.0 3.2.2, pp.54-58	Case-14 (functional only)	**NOT MEASURED at the required 1,000-asset scale**	None; No bugs reported in pilot;	Chris Daniel P. Cabataña (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-204**	The system shall track per-asset reuse history and block or confirm asset deletion according to submission state, with exact SHA-256 duplicate detection.	User deletes asset → System checks active references → Blocked, force-confirmed, or soft-deleted (30-day purge).	Functional	Should	SRS v6.0 3.2 UC-2.3, pp.54-55	SDD v3.0 3.2.3, pp.59-61	Case-15; Case-26	**Implemented and verified**	None; UC-2.3; Admin-only Media Trash and 30-day automatic purge verified by Case-26	Chris Daniel P. Cabataña (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-205**	The system shall route every submission through a reviewer lock (15 minutes), and block self-review.	Reviewer opens submission → System acquires lock and checks author → Edit and decision actions enabled or denied.	Functional	Must	SRS v6.0 3.2 UC-2.4, pp.56-58	SDD v3.0 3.2.4, pp.62-65	Case-16; Case-29	**Implemented and verified**	VF-04 / RP-04; INC-07 resolved; RP-04 implemented (refactor/p4-mobile-operability); UC-2.4	Richemmae V. Bigno (lead); Lerah A. Caones

G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-206**	The system shall let reviewers approve, request revision with remarks, or reject with a coded reason, and prevent any post from publishing without approval.	Reviewer picks decision → System records decision and changes state → Contributor notified; approved posts enter publishing.	Functional	Must	SRS v6.0 3.2 UC-2.4, pp.56-58	SDD v3.0 3.2.4, pp.62-65	Case-16; Case-29	**Implemented and verified**	VF-04 / RP-04; INC-07 resolved; RP-04 implemented (refactor/p4-mobile-operability); UC-2.4; rejected submissions can be edited and resubmitted	Richemmae V. Bigno (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-207**	The system shall let reviewers edit minor content in review with before/after diffs and severity tiers, without approving the submission.	Reviewer edits and saves → System records diff and notifies the Contributor → Submission remains in review.	Functional	Should	SRS v6.0 3.2 UC-2.4, pp.56-58	SDD v3.0 3.2.4, pp.62-65	Case-17; Case-29	**Implemented and verified**	VF-04 / RP-04; INC-07 resolved; RP-04 implemented (refactor/p4-mobile-operability); UC-2.4; Review & Save with Undo	Richemmae V. Bigno (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-208**	The system shall apply a configurable network-wide watermark to photos at publish time, scaled to image dimensions.	Scheduler publishes post → System renders watermark on each photo → Watermarked photos sent to Facebook.	Functional	Must	SRS v6.0 3.2 UC-2.5, pp.59-61	SDD v3.0 3.2.5, pp.66-68	Case-18	**Implemented and verified**	None; UC-2.5; institution-specific overrides removed; failures are audited	Mark Anton L. Camoro
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-209**	The system shall deliver in-app, email, and Messenger notifications on submission, review, and publishing events within 5 minutes in ≥95% of cases.	Workflow state change → Event listener dispatches by role and channel → Recipient receives notification.	Functional	Must	SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.3.3, pp.76-78	Case-22; Case-30b; Case-29	**FUNCTIONAL PASS; five-minute 95% delivery target not measured**	VF-02, VF-04 / RP-02, RP-04; INC-09 resolved; RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); No bugs reported in pilot;	Jay Lord C. Bayonas
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-210**	The system shall let moderators and administrators link a Messenger account with a 10-minute link code.	User requests code → System issues code and verifies the Messenger message → Account linked.	Functional	Could	SRS v6.0 3.2 UC-1.4, pp.29-31 | SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.1.4, pp.25-28 | SDD v3.0 3.3.3, pp.76-78	Case-22; Case-29	**Implemented and verified with documented behavior | Implemented; wording and deep-link refactoring pending**	INC-03 documented; INC-09 resolved; RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); UC-1.4	Jay Lord C. Bayonas
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-211**	The system shall provide optional, account-level, view-only onboarding tours with enable, dismiss, and reset controls.	User opens supported screen → System shows tour and stores progress → Tour state synced across devices.	Functional	Could	SRS v6.0 3.2 UC-1.4, pp.29-31	SDD v3.0 3.1.4, pp.25-28	No dedicated STD case identified	**Implemented (RP-02 next-action guidance complements optional tours)**	VF-02 / RP-02; RP-02 implemented (refactor/p2-first-time-independence); INC-03 documented; Seven guides; cross-cutting usability requirement	Mark Anton L. Camoro (lead); Jay Lord C. Bayonas

G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-212**	The system shall achieve an aggregate SUS score of ≥70 from ≥10 pilot users across all three roles.	Pilot users complete tasks and the 10-item SUS → Team scores per standard method → Aggregate and per-role scores reported.	Non-functional	Must	SRS v6.0 3.2 UC-1.5, pp.32-36 | SRS v6.0 3.2 UC-2.4, pp.56-58 | SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.1.5, pp.29-32 | SDD v3.0 3.2.4, pp.62-65 | SDD v3.0 3.3.3, pp.76-78	Validation SUS evidence	**TARGET NOT MET - SUS 61.8 versus target of at least 70**	VF-02 / RP-02; RP-01 & RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); INC-07 resolved; INC-09 resolved; Pilot completed; UI and navigation were the main issues reported	Jay Lord C. Bayonas (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-213**	The system shall notify reviewers (Moderators and Administrators) of new submissions, and Contributors of review outcomes and reviewer edits, as distinct events.	Submission, decision, or edit occurs → System emits event per role → Targeted in-app, email, or Messenger notice.	Functional	Must	SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.3.3, pp.76-78	Case-22; Case-30b; Case-29	**Implemented and verified**	VF-02, VF-04 / RP-02, RP-04; INC-09 resolved; RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); UC-3.3 (T-01, T-06, T-11); cross-references REQ-209 and objective 3.3	Jay Lord C. Bayonas
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-214**	The system shall keep notification read-state synchronized across sessions through SSE and support mark-all-read.	User reads notification → System pushes SSE read event → All active sessions and unread badge update.	Functional	Should	SRS v6.0 3.2 UC-3.3, pp.68-70	SDD v3.0 3.3.3, pp.76-78	Case-22; Case-29	**Implemented and verified**	VF-02 / RP-02; INC-09 resolved; RP-02 merged into dev; RP-04 implemented (refactor/p4-mobile-operability); UC-3.3	Jay Lord C. Bayonas
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-215**	The system shall support searching by manually added tags and renaming asset titles without altering the stored file.	User adds tag or edits title → System updates label or display title only → Asset searchable under new tag; storage key unchanged.	Functional	Could	SRS v6.0 3.2 UC-2.2, pp.52-54	SDD v3.0 3.2.2, pp.54-58	Case-14	**Implemented and verified**	None; UC-2.2	Chris Daniel P. Cabataña (lead); Lerah A. Caones
G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-216**	The system shall apply the watermark correctly and consistently to ≥95% of published photos, with failures audited and Administrators notified.	Photos published during pilot → System logs watermark success or failure → Consistency rate and admin feedback reported.	Evaluation	Should	SRS v6.0 3.2 UC-2.5, pp.59-61	SDD v3.0 3.2.5, pp.66-68	Case-18 (functional only)	**FUNCTIONAL PASS; 95% watermark consistency target not measured**	None; Pilot completed with no bugs; record watermark consistency and Administrator feedback (RQ7)	Jay Lord C. Bayonas (lead); Lerah A. Caones

G2	Require reviewer approval before publication, deliver at least 95% of status notifications within five minutes, and improve searchable, tagged, watermarked media management, with SUS of at least 70 from at least 10 pilot users by the end of the second development phase.	**REQ-217**	The frontend shall meet defined performance budgets and accessibility practices (bundle-budget checks, Playwright performance suite).	Build or test run → Bundle and performance checks execute → Pass or fail report.	Non-functional	Should	SRS v6.0 cross-cutting NFR/evaluation requirement - confirm exact section	SDD v3.0 cross-cutting design/deployment coverage - confirm exact section	Case-29	**Implemented and verified**	VF-04 / RP-04; RP-04 implemented (refactor/p4-mobile-operability); Pilot reported UI and navigation issues; addressed under REQ-123 and REQ-218;	Mark Anton L. Camoro (lead); Jay Lord C. Bayonas
	Requirer eviewer approval before publication, deliveratleast 95% of status notifications within five minutes,and improve searchable, tagged, watermarked media management, with SUS of atleast 70 from atleast 10 pilot users byt he end of these cond development phase.	**REQ-218**	The system shall ensure that, at 360-pixel phone and 768-pixel tablet viewports, every role-critical action (submit, approve, request revision, reject, reschedule, resolve failed publication, and accept invitation) is accessible without horizontal scrolling through a persistent primary action bar. Notification deep links shall open the exact submission in review mode.	User opens the task screen or notification link on a 360-pixel mobile viewport → The persistent mobile primary action bar and review-mode deep link are displayed → The user completes the critical action without horizontal scrolling.	Non-functional	Should	SRS v7.0 3.4.9,3.6.4	SDD v3.1 3.4.4,4.4	Case-29	**Implemented and verified**	VF-04 / RP-04; implemented on refactor/p4-mobile-operability; SRS 3.4.9, 3.6.4	MarkAntonL. Camoro(lead); RichemmaeV. Bigno
G3	Achieve at least 95% on-time scheduled publishing within plus or minus five minutes, support same-day urgent publishing, achieve at least 60% AI-caption acceptance for suggestions generated for at least 90% of uploaded images, and average AI quality of at least 4.0/5 across at least 20 submissions by the end of the second development phase.	**REQ-301**	The system shall show a master calendar with role-differentiated detail and guarded drag-reschedule (Moderators: ≤2 reschedules and ±1 day).	User opens calendar → System filters and masks by role → Events displayed; reschedule validated.
